

List Filter Plus Error: Old version of AJAX registered in web.config

Summary

After adding the List Filter Plus Webpart to a page I'm getting the following error at this page:

Unable to cast object of type 'System.Web.Configuration.ScriptingScriptResourceHandlerSection' to type 'System.Web.Configuration.ScriptingScriptResourceHandlerSection'.

Description: An unhandled exception occurred during the execution of the current web request. Please review the stack trace for more information about the error and where it originated in the code.

Exception Details: System.InvalidCastException: Unable to cast object of type 'System.Web.Configuration.ScriptingScriptResourceHandlerSection' to type 'System.Web.Configuration.ScriptingScriptResourceHandlerSection'.

Source Error:

Stack Trace:

Symptom

Add the List Filter Plus web part to a web part page. The page will display the error and stack trace in the summary section.

Resolution

List Filter Plus uses AJAX 3.5.0.0. You should check that it is installed and referenced properly in the web.config or your web application. If it is not referenced properly or is refercng an older version, here is the steps to referece it manually:

1. In the web.config, check which version of AJAX you have in line:

```
<sectionGroup name="system.web.extensions"  
type="System.Web.Configuration.SystemWebExtensionsSectionGroup, System.Web.Extensions, Version=3.5.0.0,  
Culture=neutral, PublicKeyToken=31BF3856AD364E35">
```

If it is not 3.5.0.0, they need to change the old version number to new one in all the web.config. Afterwards save your file.

List Filter Plus Error: Old version of AJAX registered in web.config

2. If the AJAX version is reference to 3.5.0.0, you should install the latest List Filter Plus version on our website and check in your web.config if you have the double tags which started with <add name="ScriptModule".

If you have it, you should remove the line below:

```
<add name="ScriptModule" preCondition="managedHandler" type="System.Web.Handlers.ScriptModule,  
System.Web.Extensions, Version=3.5.0.0, Culture=neutral, PublicKeyToken=31bf3856ad364e35" />. Afterwards  
save your file.
```
