

FAQ: Why List Forms Extensions Feature does not work in Datasheet view and custom forms?

Question

Why List Forms Extensions Feature does not work in Datasheet view and custom forms? All the hiding disappears and it doesn't work with the custom new-edit-display-forms

Product & Version

KWizCom List Forms Extensions Standard Evaluation 2.x.xx for SharePoint 2007

KWizCom List Forms Extensions Standard Evaluation 12.x.xx for SharePoint 2010

Answer

Our product does not work with data sheet view and custom new/view/edit form; it is documented on the product description. It only supports "Out of the box" SharePoint new/view/edit forms.

The whole point of the List Forms Extensions Feature is not to be required to have custom forms.
