

How to fix "WSP package does not follow the right naming convention..." powershell installation error?

Summary

This article outlines the steps on how to fix the Powershell "naming convention" error

Symptom

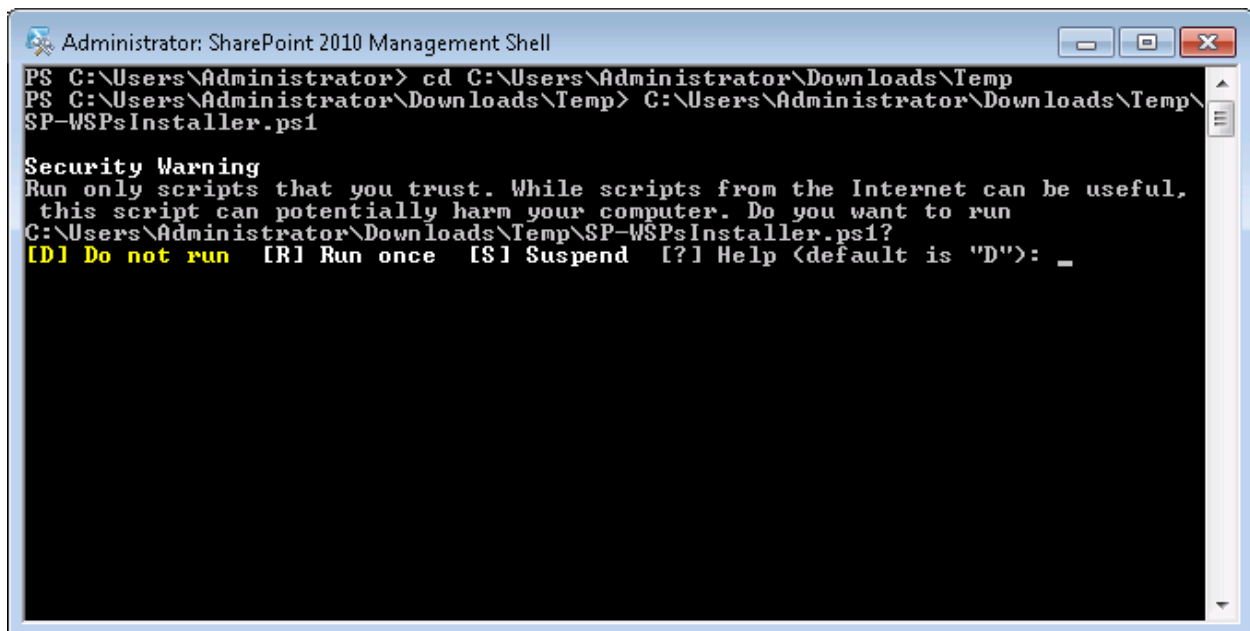

When trying to run the SP-WSPsInstaller.ps1 file, the following error displayed: "**WSP package does not follow the right naming convention. Please correct the issue and run the installation again**".

Product & Version

All KWizCom Products

Resolution

This issue can be resolved by changing the source directory where the PowerShell script is located in the PowerShell dialog (see image below)

```
Administrator: SharePoint 2010 Management Shell
PS C:\Users\Administrator> cd C:\Users\Administrator\Downloads\Temp
PS C:\Users\Administrator\Downloads\Temp> C:\Users\Administrator\Downloads\Temp\
SP-WSPsInstaller.ps1

Security Warning
Run only scripts that you trust. While scripts from the Internet can be useful,
this script can potentially harm your computer. Do you want to run
C:\Users\Administrator\Downloads\Temp\SP-WSPsInstaller.ps1?
[D] Do not run [R] Run once [S] Suspend [?] Help (default is "D"): _
```

How to fix "WSP package does not follow the right naming convention..." powershell installation error?

Example: In the image above, the directory path changed from "C:\Users\Administrator" to "C:\Users\Administrator\Downloads\Temp" by using the following command:

```
cd C:\Users\Administrator\Downloads\Temp
```
