

How do I manually disable the KwizCom Logging Feature?

Product

KwizCom Logging Feature

Question

How do I manually disable the KwizCom Logging Feature? I am unable to disable it through the site collection features section.

Answer

The logging feature is hidden so that users don't turn it on accidentally. This feature should only be turned on or used by a KWizCom support representative for diagnostic purposes. It should not be turned on unless you are given instructions to do so.

Run the PowerShell command on the server to de-activate hidden "KWizCom Logging" feature:

```
Disable-SPFeature -identity "b781c3a4-a714-4582-ae66-2ab0da239473" -URL http://mysite.com
```
