

Question

How do I remove the metadata at the bottom of a pdf file generated by iMush Print?

Answer

To remove the metadata at the bottom of the generated .pdf files:

1. Go to "C:\Program Files\Common Files\Microsoft Shared\Web Server Extensions\15\TEMPLATE\LAYOUTS\KWizCom_iMUSH_Print" folder
2. Open "KwizComPrintList.aspx" for edit
3. Find line: `$kw(el).find('link').remove();` It should be line #203
4. Add the line below: `$kw(el).find("table[id*='_toolBarTbl']").remove();` (there will already be an instance of this line present. You want to put in a second instance of this line)
5. Save the file
