

How do I hide the "apply" button added by the KWizCom Forms app?

Question

When adding the KWizCom Forms app to a site, all of my edit forms now have an apply button. Is there a way to hide it?

Answer

1. In your site, go to the "site assets" library.
2. Look for the KWIZCOM > APLFE sub-folder.
3. In that folder, look for the kwizcom.aplfe.controller.css file. Edit it and add the following style:

```
/* hide the apply button */  
  
.kwizcom-Form-applyButton-cell {  
  
    display:none;  
  
}
```

4. Save the .css file, go to your list form and refresh it (do a hard reload to delete cache).
